Touch Screen Retail Solution

Ledger Simplex "Epos" is a stand alone module within the Ledger Simplex Business Solution.

Epos solutions should be elegant, easy to use. They should provide extensive analysis and functional services such as bar code creation, direct integration with accounts. Unfortunately most epos solutions don't even come close to meeting such expectations.

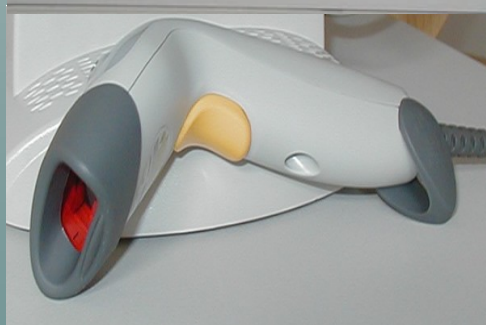

Qsys solutions are different. Qsys provides all the software you will need to run and develop your retail business. From ePos front end, bar code printing and stock management through to final accounts, Vat reporting and supplier management, our scalable solutions will grow with your business and provide a solid foundation to cope with change, offering options for manufacturing, warehouse storage and even import management, should your business require more than just Epos.

Qsys solutions can include data import utilities to provide easy transportation of stock information from spreadsheets or export routines from the likes of Sage or other legacy systems.

From grocery stores to hotels, from hardware store to electrical retailers, whatever your business style, Qsys has a solution that fits your requirements.

Installation, training, support and finance options all available in one stop.

- Easy to use touch screen enabled with barcode scanning
- Uses industry standard hardware - Fast reliable operation
- Unlimited number of products - Extensive product search facilities
- Accepts payment by Cash, Cheque, or Card
- Trade counter service allows invoice sales
- Finds products by code, barcode and manufacturer's ref
- Easy "direct inject" delivery to stock system
- 15 minute user training cycle
- Customer lay by facility - ideal for restaurants or trade counter sales
- Flexible adaptable configurations (to suit all business types)
- Reads all standard international barcodes
- 24x6x99 quick sale buttons (ideal for hospitality solutions)
- Tracks users and foot fall, times and dates
- Detailed Management Accounts
- Optional fully bespoke customising service
- Integrates with comprehensive stock management (see stock control)
- Direct access to stock records from Epos - permits product maintenance
- Integrates with Sales Ledger (Trade counter) & Nominal Ledger
- Integrated Barcode generator
- Multiple branch options
- Add on marketing tools and client loyalty/reward schemes

STOCKTAKE

Qsys Pocket PC Store Auditor

Qsys Stock Store Auditor is also part of a suit of tools to designed to aid warehouse & stores auditing.

Qsys Store Auditor provides a traditional straightforward "location-less" stock take procedure. In short, quantities of product are counted regardless of location. Where multiple quantities are counted in separate locations, the system automatically sums the count for a final total. Default count of qty 1 is assumed if the operator presses the save button immediately after scanning an item; in this way simple low volume counts can be made very quickly without entering a quantity. Whilst there is a theoretical limit to the number of items counted (limited by the size of the SD card used) it is unlikely that even a store the size of Tesco Extra would out run a 2MB card. Each item scanned is identified to the operator along with quantities currently recorded as in stock etc.

Key benefits:

- Fast accurate remote data collection and processing
- Remarkably easy to operate
- Robust reliable operation
- Simple single scan operation accurately identifies product
- Touch screen work flow - Each operation required is highlighted until correctly completed by user
- Only specified barcode symbologies are accepted - i.e. the user cannot accidentally scan a serial number in place of a stock code, thus significantly reducing the risk of wrongly scanned items
- Full product details and carton configurations displayed on single scan
- Review audit in progress line by line
- Tracks time taken to audit
- Tracks operator standing/idle times
- Tracks operator/user by users ID
- Data written directly to non volatile SD Card (no loss of data if unit fails)
- Export any data from reporting to Excel, Html, Xml
- Product codes, locations etc are entered manually or by barcode scanning
- Unique 'Qsys Finger Touch' control - No stylus to lose or damage.
- Bar Code recognition of up to 7 levels (item/case/carton/pallet etc)
- Handles special customer reference codes
- Integrates with Ledger Simplex Stock Control on docking
