

Nursery Growers

Cost Effective Desktop & Mobile Solutions

Qsys Infinity Nursery Grower Solution

Integrated production management & sales process control with inline product labelling.

Qsys Infinity's Nursery Grower Solution is a package deal that incorporates all the basics needed by a nursery which grows to sell on where sales are made either through its own retail outlet or through other small retailers and garden centres.

Qsys Infinity offers production planning for those who wish to create a sensible annual growing plan along with the marketing tools to get those plants into your target retailers. It provides the means to label the products to suit your clients' needs including bespoke layouts for every customer, or simple "house" labels for those who just want prices and descriptions.

The package includes some 20,000+ varieties of plants, shrubs and trees built into the standard plant library which you can use to plan your production and create product labels. As your business grows there is a simple upgrade path to make your system grow to a multi-user system.

Optional upgrades

Cloud services/Web Site Integration
Bespoke mobile data services for Android Nursery Assist etc.
Point of Sale terminals/Tills
Bespoke software
Online Sales Processing
Sage/Quick Books Integrator

- Sales Order Processing
- Product Availability Management
- HMRC Approved Integrated Accounting

Starter Pack Offer

- Single User Desktop
- Plant Master Library
- Infinity Label Producer
- Sales Order Processing
- Invoicing & Accounts
- 1 Year Support & Upgrades

Nursery Growing Model

The flow diagram shows the clear relationship between your Master Plant library, finished stock lines and batches of stock growing or in production. This model works well for nurseries which buy in plugs and grow on for resale. Batches can be created via the purchase order process and can be quickly added to your stocks on arrival at your Nursery. Highly flexible labelling options accommodate labelling in advance of the order arriving or on demand or at the point of invoicing. Product labels can also be easily created from within a sales order on behalf of your customers if they are trade and selling on, etc.
